# SERVICE COLUMNS

## Secure Storage Solution

Many businesses need to store and manage cash as effectively as possible. Retailers, for example, need a flexible solution for the management of till floats. Other businesses may need a simple alternative for the storage of laptops or other expensive portable technology. That is why Fichet-Bauche has created Service Columns.

### Did you know?

Hypermarkets, supermarkets managers are facing new constraints in managing their cash operations :

- expanded store opening hours,
- Cashier team rotations.

To help ease cash storage and improve better cash management and stocking, Fichet-Bauche has developed a solution called "service columns"

## Product Overview

One Service Column is made up of ten individually locked compartments. A maximum of ten columns can be placed next to one another offering a total of 100 compartments. Service Columns can be configured in one of two ways, with access via the front or via the front and the rear. Each compartment is equipped with a cylinder lock and supplied with three keys.

### Frontal Configuration

Using a master key, a service manager restocks the till floats in each of the lockable compartments. Staff can then open their allocated box with their own key. The columns are fixed to the wall and accessed via the doors at the front.

### Rear Configuration

Each compartment can still be opened from the front, but there is also a single door at the rear of the Service Column. This door, which runs the height of the column, provides access to all the compartments at the same time. Rear configured columns are installed through-the-wall.

### Options

- 300 mm high pedestal,
- Frame for through the wall installation (bank branch application for rear configuration only)
